

About GoSecure Reader

GoSecure Reader allows you to decode, open and read digital files that were protected with a plausible cover. It is a free download. In addition to the reader one must enter private key to unlock the plausible cover. The management and distribution of private key is up to the end user.

Software and Hardware Requirements:

Systems Requirements: Windows 2000, XP; English language; 5.81MB free disk space

Getting Started with GoSecure Reader

1. Install the GoSecure Reader software. Please follow the directions as per the setup wizard.
2. The installation creates GoSecure Reader icon on your desktop.
3. To launch GoSecure Reader, click on the GoSecure Reader icon on your desktop

Follow these steps to view a critical file inside a plausible cover:

1. If the protected file was sent via email, detach it and save it on hard drive. Double-click on the GoSecure Reader shortcut icon. This will open the GoSecure Reader decoder.
2. Open the file dialog box; navigate to the plausible cover that needs to be decoded, and click "Next".
3. When prompted for private key, enter the private key provided.
4. The protected file is extracted; plausible cover is destroyed and associated application, if any is launched.

Summary: The intended recipient of plausible file will be able to decode the plausible cover by using the GoSecure Reader and private key.

Uninstall and Update

Use the Uninstall commands from Windows Control Panel to remove the application.

Update will search for any updates available. If available, it will download and install them.

About GoSecure Inc

Founded in 2007, GoSecure is based in Hyderabad, India. GoSecure underlying core technology is flexible, scalable and adaptable to support a broad portfolio of innovative current and future products and solutions. The founders, a team of international renowned experts in their fields, have assembled a strong management team to build the business.

GoSecure is committed to developing innovative and easy to use, seamless end-point security solutions with zero incremental investment in infrastructure and zero change in workflow while maintaining user privacy. Our vision is based on a simple principle: robust, innovative products that are easy to use will lead to mass adoption.
